1. Introduction. Topological insulators are phases of matter characterized by an order of a new kind, which is not fit into the standard symmetry breaking paradigm.

Here's a popular story about momentum [1, 2, 3]: gradient descent is a man walking down a hill. He follows the steepest path downwards; his progress is slow, but steady. Momentum is a heavy ball rolling down the same hill.

The solution is given by the column-concatenation of the smallest three left singular vectors of  $M$ , and it can be easily acquired by computing the SVD of  $M$ . Once  $\hat{I}_\pm$  is ready, we compute  $\hat{I}^2$  by and form the three approximately sparse equations in  $\hat{I}$ . Assembling all the equations for each  $i$  and replacing  $\hat{I}_i$  with  $\hat{I}_i$  results in a sparse system, which can be solved efficiently by the ...

Mikhail Yu. Glyavin was born in Nizhny Novgorod (former Gorky), Russia, on February 14, 1965. After graduation of the Politechnical Institute, Gorky, USSR in 1988, he has been working at the Institute of Applied Physics of the Academy of Sciences of the USSR (from 1991 Russian Academy of Sciences), where he is engaged in the development of high-power gyrotrons for nuclear fusion.

This review examines the relationships between politics, sustainability, and development. Following an overview of sustainability thinking across different traditions, the politics of resources and the influence of scarcity narratives on research, policy and practice are explored.
